

Engaging mental health clinicians in healthcare sustainability.

Dr Michele Hampson

**Former Chair General & Community Faculty,
Royal College of Psychiatrists
Honorary consultant Nottinghamshire
Healthcare NHS Trust**

Sustainability: what's that to me?

- **Not my responsibility.**

Organisation: estates, procurement etc

**Responsible for quality of patient care
and (perhaps) service cost.**

- **Not relevant to me**

... and if it were

- **Can't make a difference**

Lack of information

Reality!

- **Can't reduce footprint by 80% by 2050 without clinicians**
- **Already climate change has impact on mental health**

BUT

For clinicians to make a difference they need information

& give them comparative data and they will rise to the challenge!

Getting the data: Carbon footprint of mental health trust.

**How does carbon footprint of compare
with acute trusts?**

**Can we get data about directorates or
even better clinical teams?**

Can we get comparative data?
